Project Name	Smart Lender
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Banks and financial institutions receive a large number of loan applications every day. Traditional manual verification processes consume significant time, require substantial human effort, and may lead to inconsistent decision-making. To improve operational efficiency and reduce credit risk, financial institutions require an intelligent decision support system that can analyze applicant data and accurately predict loan eligibility. The proposed Smart Lender – Loan Eligibility Prediction System leverages Machine Learning to assist banks in making faster, more consistent, and data-driven loan approval decisions while enhancing customer experience.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A male applicant seeking a loan.	Secure a loan quickly and accurately based on my eligibility.	The loan approval process is time-consuming and requires manual verification.	My eligibility depends on multiple factors such as income, credit history, employment status, and loan amount.	Uncertain and anxious about whether my loan application will be approved.
